II.

Practice

Solve.

1. Lin is tracking the progress of her plant's growth. Today the plant is 5 cm high. The plant grows 1.5 cm per day.
   a. Write a linear model that represents the height of the plant after d days.
   b. What will the height of the plant be after 20 days?

2. Mr. Thompson is on a diet. He currently weighs 260 pounds. He loses 4 pounds per month.
   a. Write a linear model that represents Mr. Thompson's weight after m months.
   b. After how many months will Mr. Thompson reach his goal weight of 220 pounds?

3. Paul opens a savings account with $350. He saves $150 per month. Assume that he does not withdraw money or make any additional deposits.
   a. Write a linear model that represents the total amount of money Paul deposits into his account after m months.
   b. After how many months will Paul have more than $2,000?

4. The population of Bay Village is 35,000 today. Every year the population of Bay Village increases by 750 people.
   a. Write a linear model that represents the population of Bay Village x years from today.
   b. In approximately many years will the population of Bay Village exceed 50,000 people?

5. Conner has $25,000 in his bank account. Every month he spends $1,500. He does not add money to the account.
   a. Write a linear model that shows how much money will be in the account after x months.
   b. How much money will Conner have in his account after 8 months?

6. A cell phone plan costs $30 per month for unlimited calling plus $0.15 per text message.
   a. Write a linear model that represents the monthly cost of this cell phone plan if the user sends t text messages.
   b. If you send 200 text messages, how much would you pay according to this cell phone plan?

7. Ben walks at a rate of 3 miles per hour. He runs at a rate of 6 miles per hour. In one week, the combined distance that he walks and runs is 210 miles.
   a. Write a linear model that relates the number of hours that Ben walks to the number of hours Ben runs.
   b. Ben runs for 25 hours. For how many hours does he run?

8. A salesperson receives a base salary of $35,000 and a commission of 10% of the total sales for the year.
   a. Write a linear model that shows the salesperson's total income based on total sales of k dollars.
   b. If the salesperson sells $250,000 worth of merchandise, what is her total income for the year, including her base salary?

9. Amery has x books that weigh 2 pounds each and y books that weigh 3 books each. The total weight of his books is 60 pounds.
   a. Write a linear model that relates the number of 2 pound books to the number of 3 pound books Amery has.
   b. If Amery has 10 3-pound books, how many 2-pound books does he have?

10. Max sells lemonade for $2 per cup and candy for $1.50 per bar. He earns $425 selling lemonade and candy.
    a. Write a linear model that relates the number of cups of lemonade he sold to the number of bars of candy he sold.
    b. If Max sold 90 bars of candy, how many cups of lemonade did he sell?

III. Challenge Problems

11. A bacteria population doubles every minute. Explain why this population growth cannot be modeled using a linear equation.

_____

_____

12. Kara used the linear model $y = 20{,}000 + 0.3x$ to predict her total salary from achieving total sales of x. What is her base salary? What percent commission does she earn?

_____

13. Correct the Error
Question: The model $2x + 5y = 85$ can be used to model how much money Tim spent on x sodas and y sandwiches. If he bought 15 sodas, how many sandwiches did he purchase?

Solution:
$$2x + 5(15) = 85$$
$$2x + 75 = 85$$
$$2x = 10 \text{ or } x = 2$$
$$Tim \ bought \ 2 \ sandwiches.$$

What is the error? Explain how to solve the problem.

_____

IV. Answer Key

1. $y = 5 + 1.5d$; 35 cm
2. $y = 260 - 4m$; 10 months
3. $y = 350 + 150m$; 11 months
4. $y = 35,000 + 750x$; 20 years
5. $y = 25,000 - 1,500x$; $13,000
6. $y = 30 + 0.15t$; $60
7. $3x + 6y = 210$; 20 hours
8. $y = 35,000 + 0.1k$; $60,000
9. $2x + 3y = 60$; 15 2-pound books
10. $2x + 1.5y = 425$; 145 cups
11. The rate of increase is not constant
12. Base salary = $20,000. 30% commission
13. The student switched x and y. Correct answer is $y = 11$.
